DSP HW2-1 report

b07902048 資工三 李宥霆

- 1. 先調整test.sh的opt_acwt,發現在0.95和1.7都可以找到較好的accuracy
- 2. 提高training的iter次數,可以發現大約會收斂在22或23個iter
- 3. 提高non-silence phone的數目為16個,降低silence phone的數目為2個
- 4. 調整gaussian的Init、total,而maxiterinc固定為(iter-1)次,在Init = 300, total = 10000的情況下,gaussian大約是呈現線性增加,最後train出來的結果與使用的參數如下:

train:

numiters	maxiterinc	numgauss	totgauss	realign_iters
22	21	300	10000	1 2 3 4 5 6 7 8 9 10 11 12 13 14 16 18 20 22

test:

opt_acwt	test_beam
1.7	200

topo.proto:

non-silence	silence
16個	2個
